EFFECTIVE**

DeBusk Services Group (DSG) delivers comprehensive resources and expertise for safe, effective, turnkey cleaning of aboveground storage tanks.

- Extensive pre-project planning
- Coordination with customer EHS, Maintenance & Inspection departments
- Highly experienced project managers, API-certified for tank entry
- Reliable, proven procedures
- Qualified crews with stringent, continuous training programs
- State-of-the-art automation/robotics for non-entry procedures
- Online options to keep tanks in service during cleaning
- Integrated degassing & vapor control
- Multiple on-site processing techniques to minimize waste outhaul
- Single source for related services, such as chemical cleaning, hydro blasting, vacuum services, hydro cutting & transportation

Safety First

DSG teams have the management expertise, advanced training and technology to safely operate in the most hazardous environments, including tanks with pyrophoric products, Immediately Dangerous To Life or Health (IDLH) atmospheres, structural damage to internals or roofs, and external leaks.

- Superior tank entry & hazard management training
- Work scope developed to minimize confined space entry
- Potential hazards are identified & a mitigation plan is submitted in advance for client review
- Remotely controlled robotics to improve personnel safety
- Project engineering for 100% spill prevention
- Ongoing training with Mentorship program for technician support

SOLUTIONS

Custom-engineered Services

DSG gathers extensive background information and creates a detailed, customized project plan, complete with three-dimensional process layouts. The quality and detail of our pre-project planning assures that we achieve your goals in the safest, most efficient way.

- Chemical circulation
- Mechanical
- Non-entry cleaning & degassing
- Vapor control

Productivity

DSG cleaning and processing technologies decrease time on site, reduce costs and improve overall efficiencies. We offer the ability to simultaneously clean and degas tanks to dramatically reduce turnaround time. For selected applications, cleaning can be performed while tanks remain in service.

Our managers provide detailed daily, weekly, and monthly reports, as well as updates on our Process Improvement Program. We also offer pricing models driven by production.

Automation

DSG utilizes the latest automated equipment and techniques to minimize in-tank man hours and improve productivity.

- Manway cannons
- Track-drive robots
- Tank sweep with continuous slurry & removal
- Manually operated manway jetting

Waste Minimization and Processing

DSG is adept at minimizing waste through dewatering and decanting processes using state-of-the-art technology. Our equipment will meet any customer specification for work within units or tank farms. Vapors can be trapped and scrubbed if necessary.

- 2 & 3 phase centrifugation
- Belt filter presses
- Plate & frame filter presses
- Outhaul & transportation assistance
